

## Equipment Name: Pressure Vessel of 300 bar

### Pressure Vessel for sCO<sub>2</sub>

The pressure vessel is expected to store liquid CO<sub>2</sub> at a maximum pressure of 300 bar and at a minimum temperature of 5° C. The purpose of this vessel is expected to act a **phase separator** to be able to supply liquid CO<sub>2</sub> to the downstream pump. it can expect a maximum withdrawal liquid flowrate of 0.2kg/s while there might be a 30% volume fraction of uncondensed vapour of CO<sub>2</sub> might exist in the feed line. The unit is intended to supply only liquid CO<sub>2</sub> to the downstream high pressure pump while the input to the unit is coming from a condenser. The output line shall be from the bottom of the vessel. The unit is expected to have a rupture disc for burst protection and a self-regulating valve for maintaining the pressure within 200bar. It should have the provision for venting CO<sub>2</sub> out during the restart operation for depressurizing the system. The unit shall have digital level sensor whose output should be monitored through the system. The vessel should also have the pressure and temperature sensors embedded in it whose output also must be data logged. The vessel should have proper insulation to minimize the losses to ambient. The maximum ambient temperature expected is 42° C. The make shall be of SS316L material complying with ASME codes of standard pressure vessel manufacturing.

### System Requirements

<b>Parameter</b>	
<b>Pressure</b>	300 bar
<b>Temperature</b>	Min of 5 deg C
<b>Equipment Make</b>	SS316 L
<b>Pressure Sensor</b>	In-built range 300 bar
<b>Rupture disc</b>	300 bar capacity
<b>Temperature</b>	RTD ± 0.1 deg C accuracy
<b>Liquid Level</b>	Digital with RS232/485 connection
<b>Self-Regulating Valve</b>	Made of SS316L body for maximum of 300 bar pressure
<b>Vapour volume</b>	Maximum 30% of the liquid volume
<b>Total Vessel Capacity</b>	To be designed as a phase separator by Vendor
<b>Inlet Feed line</b>	1" inch BSP (above the liquid level)
<b>Output Line</b>	1" inch BSP (from the bottom)
<b>Drain Line</b>	1" inch BSP
<b>Insulation</b>	Outer walls to be covered to maintain temperature 5 deg C
<b>Sight Glass</b>	No
<b>Wall Thickness</b>	Meeting ASME codes
<b>Liquid</b>	15 mins

<b>Residence Time</b>	
<b>Withdrawal liquid rate</b>	0.2 kg/s
<b>Fluid Properties</b>	Use Refprop of NIST database ( <a href="https://www.nist.gov/srd/refprop">https://www.nist.gov/srd/refprop</a> )

### **Electrical Requirement**

<b>Voltage</b>	220 to 240 V
<b>Current</b>	15 amps / 3 Phase supply

General Conditions:

1. List of Purchase orders or supply references to institute of National importance, PSU, or premier research institutes to be attached.
2. Quotation for 2 years standard warranty + 1 year optional warranty.
3. Should provide list of spares and their cost.
4. Must provide pressure test certificates, factory acceptance test (with co2) and provide the test report for the items.
