

KIPRO

A revolution. From production to post.

Because it matters.

AJA[®]
VIDEO SYSTEMS

Highly portable tape replacement.

Ki Pro combines the power of a file-based recorder with the familiar controls of a tape deck that easily goes anywhere.

The Ki Pro established a new paradigm in tapeless recording. Revolutionizing how footage tracks from production to editorial, Ki Pro captures Apple ProRes 422 files at your choice of quality level direct from the source, which can then be used in most editing systems without the need for additional import or transcoding steps. Just remove the Storage Module from the Ki Pro, connect direct to the editing computer and once the files are transferred they are immediately ready for use in the NLE software.

Ki Pro's comprehensive array of analog and digital connections let's you effortlessly bridge formats and sources within your workflow, ingesting footage to a common format and outputting to numerous simultaneous monitor outputs. Offering AJA's high-quality up/down/cross conversion and a multitude of connections, integration with your other production gear is seamless.

Ki Pro's RS-422 control allows it to be connected to editing systems, external controllers and even other tape decks, allowing it to fulfill the functions of a traditional VTR. Editing systems can perform assemble edits direct to the Ki Pro's Storage Module, often faster than rendering to ProRes files within an editing system. Ki Pro's RS422 connection can also be used to directly capture tape-based media into Ki Pro as ProRes footage ready for editing or archiving.

For control and configuration, Ki Pro can connect to your data network by Ethernet cable or wireless 802.11 and accessed via web browser on any networked computer, or even with an iPhone. Multiple Ki Pro units can be linked together and controlled from a single interface for gang recording, status monitoring and playback.
