GEL IMAGING SYSTEM

Specifications:

1. System should have a full-feature for gel or western blot imaging. It should be designed to address multiplex fluorescent western blotting, Chemiluminescence detection, and general gel documentation applications.
2. It should be based on CCD high-resolution, high-sensitivity detection technology, and modular options to accommodate a wide range of samples and support multiple detection methods. The system should be controlled by software to optimize performance for fast, integrated, and automated image capture and analysis of various samples.
3. Multiple imaging capabilities — the imager can accommodate a variety of sample types and detection methods including multiplex fluorescent western blotting. It should be perfect imager to accompany our protein and DNA electrophoresis runs as well as our western blotting experiments. It should deliver quantitative, reproducible results for fluorescence, chemiluminescence, and colorimetric detection.
4. Should have Stain-free technology, High-sensitivity blot detection and Superior Image Quality.
5. Illumination control: Trans-UV, epi-white, and no illumination for Chemiluminescence.
6. Ease of Use — Precalibrated system should provide the precise focus for any zoom setting or sample height; automated hands-free operation ensures consistent, reproducible, and high-throughput performance
