

## TECHNICAL SPECIFICATIONS FOR

### VIBRATION CONTROLLED IN-SITU MICRO MECHANICAL TESTING PLATFORM

The module must be able to:

- A. Perform tensile as well as compression tests while being imaged using Electron Backscattered Detector under high temperature (800 °C) as well as cryogenic conditions (20 K).
- B. Cyclic load testing both at ambient conditions as well as elevated temperature upto 800 °C should be a possibility.
- C. Precise determination of elongation with a minimum resolution of 100 nm.

The detailed specifications for the “Vibration Controlled In-situ Micro Mechanical Testing Platform” are given in 2 parts A and B below,

#### PART A - DETAILED SPECIFICATIONS (Mechanical testing platform)

S.No.	Item	Description
1.	Micromechanical platform	<ul style="list-style-type: none"><li>• Load Cell: Ranging between 10-15 kN</li><li>• Resolution: &lt;100 nm</li><li>• Deformation speed: Better than 1 to 50 µm/sec with uniform extension on all directions.</li><li>• Compatible to be functioning under <math>10^{-5}</math> Pa or better vacuum conditions.</li></ul>
2.	EBSD and SEM compatibility	<ul style="list-style-type: none"><li>• SEM compatible module especially for APREO S, INSPECT F, QUANTA, HELIOS G4.</li><li>• Motor Controller Electronics and software package for data acquisition, analysis.</li><li>• Suitable for wide field of view observation (10 mm length × 5 mm width) in SEM.</li><li>• Correlative SEM imaging – Elongation/Force step.</li></ul>
3.	Tensile Clamps for Flat Specimens	<ul style="list-style-type: none"><li>• Suitable for tension and compression along with cyclic loading.</li><li>• Maximum specimen dimension (mm): 60 × 10 × 5</li><li>• Minimum specimen dimension (mm): 10 × 1 × 1</li><li>• Suitable holders for testing without the requirement for holes in the gripping region</li></ul>
4.	Facility for mounting the stage outside the SEM	<ul style="list-style-type: none"><li>• Under ambient conditions and for coupled experiments under the observation of optical microscope.</li><li>• Possibility for vertical mounting</li></ul>
5.	In-situ Heating function	<ul style="list-style-type: none"><li>• Temperature range: Upto 800 °C</li><li>• Capability for performing cyclic load experiments at elevated temperatures.</li></ul>

## **PART B - DETAILED SPECIFICATIONS (Cryo-assembly)**

<b>S.No.</b>	<b>Item</b>	<b>Description</b>
1.	Cryostage	<ul style="list-style-type: none"><li>• Temperature range: 10 to 300 K</li><li>• Vibration control: &lt; 10 nm after 10 min of reaching set temperature.</li><li>• Suitability: For working in Ultra High Vacuum conditions of <math>10^{-10}</math> torr.</li></ul>
2.	Cryostat system	<ul style="list-style-type: none"><li>• Leak rate: Better than <math>10^{-9}</math> mbar <math>\times</math> l/s (for He system) at 300K</li><li>• Temperature range: 10 – 300 K</li><li>• Maximum baking temperature: &gt; 80 °C</li></ul>
3.	Cryo-cooling medium	<ul style="list-style-type: none"><li>• Medium: Liquid He</li><li>• Expected Cooling time: 20 to 30 mins</li><li>• Liquid He consumption for cooling to Set temperature: &lt; 2 litres</li><li>• Lowest temperature: <math>\leq</math> 10 K</li></ul>
4.	Connecting cables	<ul style="list-style-type: none"><li>• Provision to transfer liquid He to the cryostage should be provided.</li><li>• Appropriate temperature measurement controller should be included in the system.</li></ul>

### **Additional Requirements:**

1. Supplier should be able to provide complete solution including high temperature testing module as well as the compatible cryogenic stage.
2. Mandatory 1 year Warranty period for all parts, accessories, and components.
3. AMC cost for 3 years may be quoted.
4. Installation, commissioning, after-sales supply are on the part of supply.
5. 3-day advanced training program should be included.
