Quotations are invited for the following instrument with the specifications indicated

Instrument : **Nanoparticle analyzing system** intended to study lipid vesicles/aggregates before and after drug loading or surface modification; Additional capability to study metal nanoparticles/polymers before and after surface modification will also be attractive.

Working principle: Size-tunable nano-pore based Resistive Pulse Sensing

Specifications: The instrument should be capable of giving the following information.

1. Particle size: 50 nm to 10 microns (the lower limit can still be lower)
2. Concentration: reported as number of particles/ml
3. Particle-by-particle zeta-potential measuring capability
4. Particle-particle interaction & surface modification analysis
